

Faculty of Engineering and Natural Sciences
Seminar
Friday, May 22, 2013, 14:00, Fener Hall

Water, Electricity, Cloud

Bahadır Ödevci
imonacloud.com

Abstract

The presentation will take the audience to the developments in Information Technology during past 100 years, and will try to give a perspective as to where it is heading during the next decade. The session also aims to explain the nature of Cloud Computing by using metaphors.

Since Cloud Computing in Corporate Business is the main concentration of the presenter, the session will touch upon what benefits can Small and Medium Enterprises derive from Cloud Computing. Although having a background in Information Technology is a plus, there is no prerequisite skill or knowledge for attending the session, it is for everyone who use one of web based email services, and is aware of the fact that internet is ubiquitously surrounding us in every stage of our daily life. By the end of the session, attendees who are particularly interested in Information Technology, will leave the session with a recipe in their pocket.

Biography

Bahadır Ödevci holds an MBA degree (2007) from University of Amsterdam Business School and a B.Sc. degree (2000) in Computer Engineering from the Bogazici University, Istanbul.

He worked in Amsterdam, Moscow and Istanbul, providing technical expertise and leadership to large scale banking transformations. He worked at IBM Netherlands as Lead IT Architect for 3 years, then decided to return to Istanbul in 2011, and founded imonacloud.com.
